

## SIXTEEN IS DEAD DOCUMENTATION

"16-is-dead" is a puzzle game that is often played in pubs.

Each player may roll the dice as long as he wants

Dice throws are summed and noted.

The aim is to score a number that is as close to 16 as possible.. Anyone that has achieved 16 or more immediately loses. There are only 2 rules:

If you score 9 points, you can no longer roll the dice. It is the next player's turn.

If you score 10 points, you have to roll the dice again. The player with the highest score below 16 wins.

Here are the instructions to play the game on PC.

Firstly, when the game has started, the user will be asked

enter her/his name. Then he/she has to enter "yes" for real player

and "no" for a computer player. Furthermore, the player will enter "1" if

he/she wants to enter other players and if other players are entered,

then the game will start. When starting the game, the players will be asked how many times they want to throw the dice and how many faces the dice shall have at most (1-6).

After the game you can decide whether you want one

want to start a new round or not (input possibilities are given during the game). Have fun with the game! 😊
